EXAMPLE OF DYNAMIC DOCUMENT

Most public companies place their annual reports on WWW pages in the form of long and static PDF documents. However, this format is intended for printing rather than online browsing. **The ideal solution for that purpose is conversion** of a PDF document into the form of a dynamic document which would also create a kind of alternative to expensive, fully HTML versions of annual reports.

Dynamic documents enable the user to search for some separate phrases. This is a **very convenient way** of looking through certain parts of an annual report. These kind of documents also offer many other useful functions.

A converted file would possess **all functions** typical for a dynamic document which you are using right now.

DAGITO is a team of young and experienced team who deal with conversion of long PDF documents (e.g. annual statements) into a form intended for online browsing.

Using our service you will receive a **very attractive and functional** online version of an annual report which will not overload your server as we will keep it for you on ours. On your WWW page there will only be a link to the online version of an annual statement.

What is more, **we will provide** you with a **report** on the statistics on the number of visitors to your annual statement with frequency chosen by you.

We can also prepare version of dynamic document assigned for a server of your company.

The advantage of a **dynamic document** over other forms of presenting an annual report:

- **User friendly** - intuitive navigation
- **Attractive form of a document presentation**
- Looking at the report is **several times faster** than downloading the whole of it in a PDF format
- **Appearance suited** to the visual identification system of a company
- **Integrated search engine**
- **Possibility of printing** only the chosen fragments or the whole statement

Please contact us if you require further
information.
